

**DAVID
BOLIVAR**
BACKEND DEVELOPER

Bogotá, Colombia | +573204549315 | [My portfolio](#)
cesar.bolivarc@hotmail.com www.linkedin.com/in/davidBol094

Backend engineer specialised in Java and Spring Boot, working daily on payment-provider integrations for cross-border payouts across APAC, LATAM and EMEA. I own integrations end to end, REST clients against third-party payment APIs, asynchronous webhook (IPN) processing with signature validation, provider-to-internal state mapping, and exact monetary handling. I work test-first with JUnit, Mockito and MockServer, and treat credential handling and PII masking as part of the delivery, not an afterthought. Immersion-trained English; comfortable operating entirely in English-speaking teams.

Technical Knowledge

• Java • Spring Boot • Hibernate/JPA • JUnit/Mockito • Docker • REST APIs • AWS • Scrum/Agile • SQL • IoC • Idempotency • HMAC signature validation • Next.js • TypeScript • Tailwind CSS • Postman

Work Experience

Binance / Backend developer
APR 2024 - PRESENT - BOGOTÁ D.C

- Build and maintain payment-provider integrations for cross-border payout APIs across three regional services (APAC, LATAM, EMEA), delivering integrations end to end from partner specification to production release.
- Process asynchronous payout webhooks (IPN) end to end — HMAC signature validation, payload parsing, and provider-status to internal-payout-status mapping — keeping settlement state accurate without polling.
- Cover integrations with unit and integration tests (JUnit, Mockito, MockServer), using parameterised tests so each new edge case is a data row rather than a duplicated test method.
- Convert recurring pull-request feedback into documented, repository-wide engineering conventions.
- Contribute to the customer-facing UI in React, Next.js and TypeScript, building reusable components and debugging issues across the full path from browser to Spring Boot service.

Universidad de los Andes / Backend developer / Intern
SEP 2021 - JUL 2022 - BOGOTÁ D.C

- Design, develop, and sustain code using back-end technologies, including JavaScript, PHP, Drupal CMS, MySQL, and some CSS at the front-end from time to time.
- Engage in all stages of the software development process, from analysis to design, coding, testing, and documentation.
- Provide guidance and training to junior team members to uphold high standards of code quality and speed up their team implementation.

Education

Politécnico / Software engineer
FEB 2025 - JUN 2027 - BOGOTÁ

Focus on software development and engineering.

ILSC Education Group/ English
JUL 2023 - FEB 2024 - BRISBANE

Cultural immersion in Australia and web projects planning.

SENA Institute / ADSI
JAN 2020 - JUL 2022 - BOGOTÁ

Software development, databases, and project planning.

SenaSoft / National competition
OCT 2021 - BOGOTÁ

Represented my campus in the software development category.
